

Key Workflows for Car Rental System

Below are key workflows tailored for your rental e-commerce marketplace:

User Registration:

1. User signs up on the front-end.
2. User data is sent to Sanity CMS for storage.
3. A confirmation email is sent via a third-party email API.

Product Browsing:

1. User browses car categories on the front-end.
2. Front-end fetches product data from Sanity CMS using a Product Data API.
3. Cars are displayed dynamically based on availability and filters.

Order Placement:

1. User selects a car and rental duration.
2. Order details (car ID, rental duration, deposit) are sent to Sanity CMS.
3. A payment request is sent to the payment gateway.
4. Order confirmation is displayed and saved in Sanity CMS.

Shipment/Return Tracking:

1. Return status is updated in Sanity CMS using a third-party API.
2. User views real-time status updates on the front-end.

Category-Specific Instructions:

Include workflows for rental durations, vehicle condition reports, and return management.
